SUMMARY

Editorial

Dear colleagues,

The field of Alzheimer's disease diagnostics and therapeutics has become one of the most exciting areas in all of medical research. The Clinical Trials on Alzheimer's Disease (CTAD) meeting, being held this November 29-December 2, 2022, promises to continue the excitement!

Why is our field so exciting? Rapid progress in our field has resulted from huge investments by governments into basic science research, followed by more recent huge investments by the private sector into diagnostic, biotech, and pharmaceutical companies. It has only been 15 years since molecular imaging with amyloid PET scans first demonstrated the ability to detect Alzheimer's disease pathology in living people. Now, amyloid PET is widely available, tau PET is being employed by many clinical trials, and very recently blood tests for Alzheimer's disease have shown great promise for screening, and even for diagnosis.

But, without question there is growing evidence that monoclonal antibodies, which remove amyloid plaque, appear to slow cognitive decline. Unfortunately, these treatments are also associated with ARIA, including brain swelling and bleeding in the brain. There is considerable controversy concerning the significance and impact of these findings, including whether or not governments and medical insurance will provide financial coverage for such treatments.

These issues will be at the center of the CTAD meeting being held in San Francisco this Fall. Experts from academics and industry will be attending, presenting their data and discussing the pros and cons of various controversial topics. In addition to the formal program there will be extensive networking and discussions around the poster sessions, coffee breaks, formal receptions, and in the hallways.

San Francisco is an especially beautiful city, surrounded by the Pacific Ocean and the San Francisco Bay. Golden Gate Park, and the Presidio are huge parks filled with trees, flowers and historical sites. We have three internationally famous universities, the worlds' largest biotech hub just south of the city, and Silicon Valley further south. Don't forget to include some vacation time and consider visiting the Muir Woods, the Napa Valley, and Carmel/Big Sur to the south.

I'm looking forward to seeing old friends, and making new ones at the CTAD meeting this Fall in beautiful San Francisco.

CTAD 2022 Lifetime Achievement Award

This year the Lifetime Achievement Award in Alzheimer's Disease Therapeutic Research is awarded to Reisa Sperling MD, Ph.D. and Keith Johnson, MD, in recognition for their outstanding contributions to the advancement of AD clinical trials research.

Reisa SPERLING MD

Professor of Neurology at Harvard Medical School and Director of the Center for Alzheimer Research and Treatment at Brigham and Women's Hospital, Boston, MA (USA)

Dr. Reisa Sperling is a neurologist focused on the detection and treatment of Alzheimer's disease (AD) at the pre-symptomatic or "preclinical" stage of AD. Dr. Sperling is a Professor in Neurology at Harvard Medical School, and Director of the Center for Alzheimer Research and Treatment at Brigham and Women's Hospital and Massachusetts General Hospital. Dr. Sperling is the co-Principal Investigator of the Harvard Aging Brain Study, and the NIH funded Alzheimer's Clinical Trial Consortium (ACTC). She co-leads the Anti-Amyloid Treatment in Asymptomatic Alzheimer's disease (A4) Study, and recently launched two new prevention trials in the AHEAD 3-45 Study with the ACTC.

Keith JOHNSON MD

Professor of Radiology and Neurology at Harvard Medical School and Director of Molecular Neuroimaging in the Division of Nuclear Medicine and Molecular Imaging at the Massachusetts General Hospital, Boston, MA (USA)

Dr. Johnson is a Professor of Radiology and Neurology at the Harvard Medical School. He is also an Associate Radiologist and the Director of Molecular Neuroimaging in the Division of Nuclear Medicine and Molecular Imaging at the Massachusetts General Hospital (MGH). He also serves as an associate physician and staff neurologist in the Memory Disorders Unit at the Brigham and Women's Hospital as well as a Clinical Associate in Neurology at the MGH. He is co-director of the Neuroimaging Program of the Massachusetts Alzheimer's Disease Research Center and its Dominantly Inherited Alzheimer Network (DIAN) research initiatives. He oversees the Clinical Brain Positron Emission Tomography (PET) Service at the MGH and also practices as a neurologist that specializes in neurodegenerative disorders. Dr. Johnson also maintains an Internet teaching atlas of neuroimaging known as the Whole Brain Atlas. His major research interests include the early diagnosis and treatment monitoring of neurodegenerative diseases, including Alzheimer's disease, Parkinson's disease, and dementia with Lewy bodies.

"The Current and Future State of AD plasma biomarkers"

Kaj Blennow , MD, PhD

Academic Chair in Clinical Neurochemistry, University of Gothenburg, Head of the Clinical Neurochemistry Lab, Sahlgrenska University Hospital, Gothenburg, Sweden

Kaj Blennow is Professor and Academic Chair in Clinical Neurochemistry at University of Gothenburg, and Head of the Clinical Neurochemistry Lab at Sahlgrenska University Hospital, Gothenburg, Sweden. His main research interest is CSF and blood biomarkers for Alzheimer's disease (AD) and other brain disorders, and the application of these to increase the understanding of AD pathophysiology, as well as for screening, diagnostics and in therapy monitoring in clinical trials. Dr. Blennow has published more than 1700 original research papers and review articles in peer-reviewed journals, with more than 110.000 citations, and he has an H-index of 151. He is President of the Society for CSF analysis and Clinical Neurochemistry and head of the Alzheimer's Association QC program for CSF and blood biomarkers.

"Targeting Immuno-Metabolic Pathways in Alzheimer's Disease: Novel Mechanisms and Therapeutic Opportunities"

Suzanne Craft, PhD

Professor in Gerontology and Geriatric Medicine, Wake Forest University School of Medicine, Winston-Salem, NC (USA)

Dr. Suzanne Craft received her Ph.D. from the University of Texas at Austin, and then completed fellowships at Boston University and Harvard Medical School. She has been a faculty member at Washington University in St. Louis and at the University of Washington. In 2012, she joined the faculty at Wake Forest School of Medicine, where she is Professor of Medicine, and Founding Director of the National Institute on Aging-funded Wake Forest Alzheimer's Disease Research Center. Dr. Craft has served as a member of the Alzheimer's Association Medical and Scientific Advisory Group, the NIA Board of Scientific Counselors, and the Executive Committee of the Alzheimer's Clinical Trial Consortium. Dr. Craft's research program investigates the role of metabolic disorders in the development of Alzheimer's disease, through translational studies and innovative clinical trials of pharmacologic and dietary intervention to treat or prevent Alzheimer's disease. She led a ground-breaking multi-site trial of intranasal insulin for the treatment of Alzheimer's disease that was funded by the National Alzheimer's Project Act. She has received a prestigious Zenith Award from the Alzheimer's Association and a National Institute of Health MERIT award for research excellence. Her work has been featured in HBO's Emmy-award winning series "The Alzheimer's Project: Momentum in Science", in the New York Times and Time magazine, as well as on BBC Newshour, and PBS Newshour.

Miia Kivipelto, MD, PhD

Professor in Clinical Geriatrics at Karolinska Institutet, Center for Alzheimer Research, and Director of Research and Development at Karolinska University Hospital, Stockholm (Sweden)

Miia Kivipelto is Professor in Clinical Geriatrics at Karolinska Institutet (KI), Center for Alzheimer Research and senior geriatrician and Director of Research & Development at Theme Aging and Inflammation and Medical Unit Aging at Karolinska University Hospital, Stockholm, Sweden. Part of her Nordic Brain Network multidisciplinary research team (around 100 researchers and clinical staff) is located at University of Eastern Finland and Imperial College London, UK, where she has part time position as Professor. Her frontline research findings have been published in leading journals (340+ publications, H-index 78) and she has received numerous prestigious awards. Dr. Kivipelto's translational research focuses on the prevention, early diagnosis and treatment of cognitive impairment, dementia and Alzheimer's disease (AD). Through epidemiological studies, Prof. Kivipelto has identified various lifestyle and vascular risk factors for dementia and interactions with genetic factors and clarified underlying mechanisms. She is the PI of the landmark FINGER trial and founder and scientific leader of World-

Roger Nitsch, MD

CEO and President Neurimmune, Schlieren (Switzerland)

Roger Nitsch serves as CEO and President of Neurimmune, which he founded in 2006 with two business partners. A neuroscientist with a background in medicine, Roger is recognized as an opinion leader in neurodegenerative diseases with over 30 years of experience in Alzheimer's disease research. He is a Potamkin Prize winner and Member of the German Academy of Sciences and served as a founding director of the Institute for Regenerative Medicine (IREM), University of Zurich. Roger holds an MD degree from the University of Heidelberg and earned his post-doctoral qualification at the Massachusetts Institute of Technology and Harvard Medical School.
